

Services

Cybersecurity Services

TD SYNEX's Security Services portfolio

The number of organisations confirming 5 or more breaches jumped by 53% between 2021 and 2022. A high number of leaders also attribute those breaches, at least in part, to a lack of cybersecurity skills among IT professionals.

The availability of skills, particularly the experienced skills you really need is so hard to come by, and the costs of running an effective 24/7 security operation means that for many partners the investment is not justifiable. TD SYNEX's Security Services portfolio has been created for this purpose. To offer a layered range of cybersecurity services built to make the latest and most powerful cybersecurity services available to our partners, without the need to invest in huge internal teams of people and multiple tools.

TD SYNEX is also offering services in Cloud, Datacenter and Networking.
